

Service Maintenance

Since 1983, Computer Research Center, Inc. has been providing comprehensive on-site and remote computer system networking support and maintenance. We presently service a large number of customers in education, banking, healthcare, accounting, law firms and manufacturing industries.

Guard against downtime with On-Site and Remote Maintenance for your Servers, Networks, printers and desktop workstations.

Implementation:

1. CRC will examine all the components of the entire network system. With the information gathered, CRC creates a comprehensive package called "**computer system Profile.**"
2. In addition to the above package, you will receive a comprehensive report of the current status of your network system. This package includes a list of all-existing problems and associated cost to resolve these problems.
3. Upon approval, CRC shall resolve any existing problems.

On-Site service maintenance:

Based on the number of the workstations, servers, printers, and network peripherals, CRC will quote a **fixed monthly fee** to maintain the equipment and provide scheduled Preventive service maintenance.

Remote service maintenance:

To reduce the cost of maintenance and speed up maintenance, we provide our clients with ongoing remote maintenance as needed. This service can be available to all your servers, critical hardware, as well as your PCs.
